

BT5 Amplifier to Telephone Connect Unit

Connect the amplifier of your choice to your telephone system by plugging into an extension socket where a conventional telephone would be used.

The BT5 is a free-standing, self-powered connect unit (Approval Number S/2455/3/H/452969).

When this extension is called the ringing current is detected and the BT5 will loop the line. An acknowledge tone is sent to the caller indicating that an announcement can now be conveyed to the PA System.

After the announcement is finished the BT5 will disconnect from the PA System and release the telephone extension ready to accept another paging call.

Technical Specification

Power Supply	220~240Vac, 50Hz
REN value	1.0
Protection	Fuse protection for supply input, supply and line
Dimensions	H122 x W270 x D70 mm

Product Code : 10-0442-003
