

IRT-400R Repeater Panel

An infra-red listening system Repeater Panel transmitter complete with Power Supply Unit and Mounting Bracket.

- * Designed for use with either the IRT-M110 or the IRT-M400 infra-red assisted listening transmitter to extend signal coverage up to approximately 730m².
- * The unit is equipped with a ¼" threaded mounting hole and can be screwed to a photographic tripod stand for portable use, or it can be wall-mounted with the supplied mounting bracket.
- * The transmitter is used with suitable receiver modules to be purchased separately.

Items may be purchased separately: IRT-400R(18-0031-U01), PSU-03(18-0096-U01), BKT-01(18-0102-C08)

More repeaters can be added to accommodate further increased room sizes or configurations.

Product Code : 18-0031-000

Please Note:

Infra-red receivers operating in the low band (95kHz and 250kHz) can suffer from florescent lighting interference. In cases where high frequency florescent and/or incandescent lighting are used (this includes modern energy-saving lamps) the infra-red signal may become unusable. In these cases use the high frequency infra-red systems operating above 2MHz.
